# OpenMPF

Bridging the Gap in Media Analytics

The Open Media Processing Framework is a scalable, web-friendly platform designed to bring modern algorithms to media analytics.

OpenMPF provides workflow management to enable:

- **Algorithm Evaluation** – Leverage provided Application Programming Interfaces (APIs) and machine–readable output to analyze algorithms quickly and efficiently.
- **Research and Testing** – Rapidly migrate state–of–the–art research concepts to operational capabilities by developing toward the OpenMPF API.

OpenMPF is free and open–source

Media Processing
- Images
- Video
- Audio

Plug–in–Architecture (C++, Java, and Python)
- Detection
- Tracking
- Classification
